The Commonwealth Institute of Biological Control exists to provide a world service on the use of biotic agents in the solution of pest problems. It undertakes studies on the biology of pests and their natural enemies, selects suitable organisms for field trials and can collect or breed them for release in the target area. If required it will assist in field release and assessment. Information is also provided on all aspects of the use of biotic agents in pest control through Biocontrol News and Information, parasite catalogues, reviews on biological control, literature surveys for specific projects, research papers and in response to enquiries. For the Stations, in-service training can be arranged for scientists and technicians in relevant techniques for field research and laboratory propagation of natural enemies. By arrangement with nearby universities the Institute will supervise studies for higher degrees carried out as part of its research programme. Advice is available to developing countries who wish to set up their own biological control service.

CAB PUBLICATIONS AND SERVICES

Main Journals

The abstract journals form one part of a range of services in agricultural science provided by CAB, and will contain in 1981 a total of 180,000 abstracts and titles. With records derived from over 8,500 serials and many other publications, the journals constitute the only comprehensive coverage in English of the world literature on agriculture and related sciences. Readers' comments on the journals, their subject and literature coverage, are welcomed.

Specialist Journals

In response to demand, CAB has launched a new series of journals for the specialist research worker; some cover multidisciplinary topics, others deal with a single crop or product. Records for these journals are selected from the CAB database, and may be supplemented by relevant items from collaborating organizations.

Magnetic Tapes

Since 1973 (1972 in Animal Health) the journals have been produced by computer techniques. The consolidated database, now containing over 1,100,000 records and increasing by 12,000 each month, is available on magnetic tape. Complete sets of tapes or parts corresponding to selected subjects may be leased. Prices and sample tapes on request.

Online Services

The CAB database, known as CAB ABSTRACTS, is accessible over ordinary telephone lines via Lockheed's computer based DIALOG Information Retrieval Service and the ESA/RECON system and DIMDI. On-line access to CAB ABSTRACTS provides an immediate and highly efficient method of obtaining references to papers published since 1972-73. CAB ABSTRACTS is available on the SDC ORBIT system.

CAB Search Services

CAB scientists who compile the CAB database will also carry out searches for customers. The basic charge is £25 plus £0.10 per abstract retrieved. A regular monthly SDI service can be supplied for £100 per year for up to 50 references per month.

Annotated Bibliographies

3000 Annotated Bibliographies already available provide information on specific topics.

Other Publications

A wide range of review articles, technical communications, reports and books are published. Write for our catalogue.

Document Delivery Service

Most original articles abstracted in CAB journals are available as photocopies. Order forms are printed in each journal or are available in bulk from CAB.

Ordering Information

Subscriptions should be fully paid by 1st December for the volumes to be issued in the following year.

Many journals are available at special rates to subscribers in CAB member countries; details from CAB. Member countries are listed below.

A subscription provides entitlement to monthly (or quarterly) parts plus annual indexes. Rates include packing and mailing by air post to distant countries wherever the cost can be absorbed. Orders should be sent to:
